

How to Grow Fritillaria

Position – Full sun or part shade

Soil – Moist but well-drained

Flowering Period – Summer

Hardiness – Hardy to Fully Hardy

Where to plant Fritillaria

Fritillaria are best planted in a moist but well-drained soil of chalk, clay, sand or loam within an acidic, alkaline or neutral PH balance. They are best positioned in an area of full sun or part shade. Fritillaria are well suited to flower beds and borders within cottage and informal garden settings.

How to plant Fritillaria

Amend the planting area with grit and a little compost to improve drainage and promote healthy growth. Plant Fritillaria around 15-20cm (6-8in) deep as equal intervals, ensuring you consider its mature spread.

How to care for Fritillaria

Water regularly during active growth. This watering regime can then be reduced as the plants enter dormancy. Once the flowering period ends and the leaves die off you may wish to cut stems back to ground level. Apply an extensive, heavy mulch in winter and replace with a top dressing of compost in spring.

How to propagate Fritillaria

It is possible to propagate Fritillaria by seed down in pots in autumn. It is vital that you expose your plants to the cold weather in winter as this will encourage germination in spring. Alternative, you can propagate by offsets in late summer.
