

How to Grow Itea

Position – Full sun or part shade

Soil – Moist but well-drained, moderately fertile

Flowering Period- Summer/autumn

Hardiness – Fully Hardy

Where to plant Itea

Itea are best planted in a moist but well-drained, moderately fertile soil of clay, loam, chalk or sand (depending on the variety) within a neutral to slightly acidic PH balance. They are best positioned in an area of full sun or part shade. Itea are well suited to being planted in borders.

How to plant Itea

Itea like a moderately fertile, humus-rich soil, so amend the soil with some compost before planting.

How to care for Itea

Water regularly whilst the plants are getting established. When they are mature, watering should be reduced to about once a week as they become more tolerant of drought once established. Prune after flowering, cutting back to strong buds.

How to propagate Itea

It is possible to propagate Itea by seed or semi-hardwood cuttings.
