

# How to Grow Oxalis

**Position** – Part shade

**Soil** – Moist but well-drained

**Flowering Period**- Summer/autumn

**Hardiness** – Half Hardy

## Where to plant Oxalis

Oxalis are best planted in a moist but well-drained soil, preferably of loam or sand within an acidic, alkaline or neutral PH balance. They are best positioned in an area of partial shade. Oxalis are well suited to being planted in pots and containers.

Find out more about soil types and how to determine your soil type by clicking [here](#).

## How to plant Oxalis

Amend the planting area with compost to improve the soils drainage. Dig a shallow hole, around 3-5cm (1-2in) deep and plant your bulbs around 8cm (3in) apart from one another. Water well after planting.

## How to care for Oxalis

Keep soil moist but be careful not to overwater your plants as this will result in the bulbs rotting. Watering should then be ceased once the foliage has died down and the plants have entered dormancy.

## How to propagate Oxalis

It is possible to propagate Oxalis by seed or by division.
