

# How to Grow Passiflora

Aspect: Sun or part shade

Flowering: Spring

Hardiness: Half Hardy

Soil: Moist but well-drained

## Where to plant Passiflora

Passiflora are best planted in a moist but well-drained soil of sand, clay, chalk and loam in an acidic, alkaline or neutral PH balance. They are best positioned in full sun or part shade with protection from adverse weather conditions and strong winds. They look particularly attractive within wall side borders and courtyard gardens within containers or cottage and informal garden settings.

Find out more about soil types and how to determine your soil type by clicking [here](#).

## How to plant Passiflora

It is advised you supplement the planting area with compost as this will aid in providing additional nutrients. Please take care when handling Passiflora as they are highly toxic if ingested into your system.

## How to care for Passiflora

Pruning should be undertaken once the flowering period has finished. Apply a balanced fertiliser during early spring. Water your plants thoroughly throughout active growth, especially during periods of drought, decreasing the volume of water needed during the winter.

## How to propagate Passiflora

It is possible to propagate Passiflora by seed or layering during spring or by semi-hardwood cuttings during summer.
